

# DRIVER ID

Measure and report on driver utilisation

**VISION** | corporate services

ALLOWS **FLEETTRACKER** TO  
ASSOCIATE JOURNEY DATA  
AGAINST INDIVIDUAL DRIVERS

## How Driver ID works...

**FleetTracker's** Driver ID collates business intelligence against individual drivers who use different company vehicles on a regular basis and also differentiates between business and private mileage.

Driver ID uses uniquely coded "dallas" keys assigned to employees, with driver ID readers fitted to the steering column in every vehicle.

Each driver must tap their key against the reader which "pairs" them with that vehicle. To differentiate between business and private mileage drivers simply tap the corresponding key to record the relevant journey type.

Once "paired", the system begins to record data, including journeys, driving behaviour, and time behind the wheel, providing visibility of how responsibly drivers are operating each vehicle they are assigned to.

This results in a reduction of fleet operational costs through economical driving, helps to improve the safety of employees out on the road, and allows costs and motoring fines to be correctly allocated to the relevant drivers.

Driver ID can also be configured during installation to act as a secondary immobiliser for the vehicle, improving vehicle security.

private mileage  
dallas key

business mileage  
dallas key

drivers must apply their personally coded "dallas" key against the dashboard / steering column reader before:

- » journey data can be accurately recorded against that particular driver
- » the car can be started (secondary immobilisation - optional)

## How Driver ID can help your business...

### » Reduces fuel & running costs...

helps monitor individual driver behaviour - promoting responsible, safe and more fuel efficient driving

### » Measure business/private mileage...

accurately report on private and business mileage through the use of dallas key identification

### » Reduces administrative burden...

eliminates the task of handwritten time sheets and is less likely to contain inaccurate records

### » Highlights driver performance...

speeding instances, accidents, and other motoring offences are allocated against the correct driver

### » Improves productivity...

provides accurate time & journey data against the individual driver, making your fleet easier to manage

### » Improves security (optional)...

the "dallas key" and dashboard reader can act as a secondary immobiliser, as the vehicle will not start until the two are "paired" by applying the key to the reader
