

Coverage where you need it most

Boostbox - 3G for your business or home-office

O₂
business

The simple way to a better signal

Don't let signal strength or a busy network stop you from using your mobile. Boostbox is a small, low-powered cell that plugs into your broadband, giving you your very own 3G voice and data hotspot.

It's perfect in buildings where there's little or no reception. Or for times when there are too many people using the network at once. It doesn't need O₂ network coverage to work, just your broadband, which doesn't need to be with us either.

Need a bigger hotspot?

Boostboxes can be grouped to give you even more coverage. Our technical team will install these for you.

The benefits:

- Single cell option is easy to install – plug in and off you go
- Multiple cell option installed by us*
- Both options improve coverage at no extra cost to your mobile tariff
- They work with all mobiles that use our 3G network
- You choose which mobile numbers can tap into them.

We'd love to tell you more

What our customers say

"I plugged in my Boostbox last night and hey presto – a full O₂ signal in my home for the first time in 14 years. Thanks very much. I can't recommend this solution enough."

Mark Baird

*Head of Industry Affairs and Alcohol Policy,
Diageo GB*

"I have full signal at home for the first time since we moved here in July. Excellent customer service from O₂ this afternoon too. Thanks for all your help."

Andrew Didlick

*Director of Communications,
Peugeot Motor Company PLC*

"The BoostBox has been a great success. We currently have twenty users on the system. So far the service has been very reliable and transparent."

*Senior Manager,
Global Communications Company*
